

### Process for Shared Care Protocol reviews

## **Proposed process for Shared Care Protocol reviews**

### **Questions to think about before creating a Shared Care Protocol:**

- First, does a SCP already exist for the medicine?  
Approved SCPs will be available on the GMMMG website. If one already exists, then it may be worth discussing with the protocol authors to extend it for your service etc.
- Does the medicine meet the criteria for a SCP (See RAG List and RAG definitions)
- Involve the relevant people in developing your SCP from both the acute/tertiary setting and primary care. Since most protocols will involve GPs being asked to prescribe specific medicines, then it is sensible to ensure they are involved in the development of the protocol
- Develop the protocol using the standard SCP template
