

September 2021

Again, just a few short notes this month.

In Chapter 3, cetirizine oral solution sugar free has nearly doubled again: up by almost 75% to 11.24 (200ml)

In Chapter 4, atomoxetine capsules are down again although not by quite so much this month. Lower strengths are down around 10%, higher strengths down around 7%.

This time, though, the reason for writing is to point out the new Category VIIC for products where purchase prices are significantly below their NHS price e.g. <https://psnc.org.uk/our-news/inclisiran-leqvio-added-to-a-new-section-in-the-drug-tariff-part-viic/>

The only product currently in Part VIIC is inclisiran injection (Leqvio) and its price is £55 although the PSNC webpage indicates that the purchase price is £45 per pack!
