

**September2023**

A very limited commentary before another round of Category M changes next month.

Again, there was a large number of price concessions for August, totalling 134 which is one more than last month. Note that every strength of Category M atorvastatin had a concession so there will be a large financial imoact from that drug alone:

10mg and 20mg will cost around three times Tariff price, 40mg more than twice and 80mg four times Tariff price.

And again, atomoxetine capsules are noted, with all strengths doubling in price so having dropped to around a quarter of the original price for Strattera, they are back at around half the price of the former brand.
